

## Inventory: "Quarantine"

	Thumbnail	Title	Date	W x H	Media	Description	Edition
1		Colonists	2021	37 x 16" 94 x 41 cm	Photograph on aluminum	The COVID-19 coronaviruses are so alien that they could be colonists from the rings of Saturn. What is the origin of this virus? Is it natural or lab-made?	21 + 2 AP
2		Patient Zero	2021	24 x 16" 61 x 41 cm	Photograph on aluminum	The image represents the first human encounter with a COVID-19 coronavirus. The uninfected abstract was curious and detected no threat from the tiny virus. Compare with Confrontation. Can bad things come in small packages?	21 + 2 AP
3		Invasion	2021	24 x 16" 61 x 41 cm	Photograph on aluminum	The image represents inhalation of three coronaviruses into our nasal passages, mouths or throats. These are common entryways for coronavirus infections. Did you wash your hands thoroughly before rubbing your nose? Did you use sanitizer before biting your fingernail?	21 + 2 AP
4		Propulsion	2021	16 x 16" 41 x 41 cm	Photograph on aluminum	COVID-19 coronaviruses could ride fan blades as distribution systems. Is that restaurant fan blowing viruses at you?	21 + 2 AP
5		Airborne	2021	11 x 16" 28 x 41 cm	Photograph on aluminum	In the military, airborne forces are paratroopers. Spiked coronaviruses look like parachutes at various altitudes. Airborne considers insecurity about air quality. Did your friend sneeze without a mask? Are viruses suspended in the air? Is there a defense against aerial warfare?	21 + 2 AP
6		Replication	2021	24 x 16" 61 x 41 cm	Photograph on aluminum	The image represents human organs under assault. COVID-19 may affect the lungs, heart, brain and testes. Will fallopian tubes receive sperm or germ? To multiply, viruses use replication, not reproduction. Do air hunger, chest pains, diarrhea or confusion indicate viruses running amok inside you?	21 + 2 AP

	Thumbnail	Title	Date	W x H	Media	Description	Edition
7		Cough	2021	24 x 16" 61 x 41 cm	Photograph on aluminum	When infected people cough, they spray viruses. The pareidolia face (visible if you turn your head a bit to the left) is coughing coronaviruses at us. Is the cougher's mask enough to protect me or do I need to wear one too?	21 + 2 AP
8		Shelter in Place	2021	24 x 16" 61 x 41 cm	Photograph on aluminum	The image represents someone self-quarantining in the safety of their home, while coronaviruses lurk outside. Is COVID-19 causing germaphobia and agoraphobia (fear of leaving home)?	21 + 2 AP
9		Lock Down	2021	24 x 16" 61 x 41 cm	Photograph on aluminum	The image shows how fear of COVID-19 creates a wall of isolation and quarantine. Cities, states and even countries have experienced pandemic-related lock downs. The errant virus is the opening society needs to defeat these microbes. Are locked-down people POWs? Cowards? Martyrs? Heroes? Fools? Does touch deficit erode humanity? Stunt childhood development?	21 + 2 AP
10		Confrontation	2021	24 x 16" 61 x 41 cm	Photograph on aluminum	At this point in the story, the uninfected abstract recognizes the enormous threat from the huge/ominous coronavirus. Compare with Patient Zero. Can admitting that the pandemic is real make it go away?	21 + 2 AP
11		Contact Tracing	2021	24 x 16" 61 x 41 cm	Photograph on aluminum	The image represents people directly and indirectly exposed to COVID-19. Epidemiologists hope to use contact tracing to identify superspreaders. Do you need to self-quarantine or get tested if a close associate has COVID-19?	21 + 2 AP
12		Counterattack	2021	24 x 16" 61 x 41 cm	Photograph on aluminum	The image represents scientific countermeasures against the coronavirus. Disinfectant sprays break down the virus's protective envelope. Vaccine-enhanced immune systems have trained white blood cells that defend against the coronavirus. These two approaches appear as incoming virus-seeking bombs.	21 + 2 AP
